

Town of Nags Head Sand Removal and Relocation Guidance & FAQ's

November 18, 2019 Version

Many property owners within the Town of Nags Head consider the removal and/or relocation of sand from areas of their property. Depending on the conditions or circumstances, and the intended work, different regulations or permits may apply.

Sand Relocation Authorization under the Town's Beach Nourishment Major Permit

- This Authorization is...
 - For the removal or relocation of windblown sand associated with the recent Beach Nourishment project;
 - Is only applicable to properties south of the Bonnet Street Beach Access; and
 - Is only applicable to the removal or relocation of sand which is affecting or accumulating around a house or structure, pools, fences, walkways and driveways.
- Projects involving work west of the Static Line or First line of Stable Natural Vegetation (FLSNV) are not time restricted; projects involving work east of the Static Line or FLSNV are only allowed between November 16, 2019 and April 30, 2020, with a cutoff date of April 17th for new permits to ensure work will need to be completed by April 30th.
- Associated work...
 - Must not disturb an unimproved land area or any portion of the frontal dune system;
 - Must not be within 30 feet of normal water level or normal high-water level;
 - Must not involve removal, damage, or destruction of threatened or endangered animal or plant species; and
 - Must not alter naturally or artificially created surface drainage channels;
 - Must retain sand within the CAMA Area of Environmental Concern ("AEC"), an area which is based on the Erosion Rate; the AEC varies from property to property, please check with your Local Permit officer for more information; and
 - Must involve the stockpiling or redistribution of sand on the east or west side of the dune, deposited in a manner that does not affect the profile of the dune system, or plantings or sand fencing on the east side of the dune.
- Depending on the scope of disturbance, the removal of windblown sand will be classified as one of 4 project types:

Type A	The clearing of areas, such as walkways, with minimal or no disturbance beyond such areas
Type B	Less than 200 square feet
Type C	Shall not exceed a total disturbed are of 1,000 square feet or exceed greater than 2,700 cubic feet of material removal/relocation
Type D	Exceeds a total disturbed area of 1,000 square feet and/or exceeding more than 2,700 cubic feet of material removal/relocation

- Typical Work Conditions - The following conditions are typically imposed on any authorization:
 - Work shall only be conducted Monday through Friday between 8:30am and 5pm.
 - The area on which this activity is being performed must maintain a slope of adequate grade so as not to endanger the public or the public's use of the beach and should follow the natural slope as closely as possible.
 - Dune disturbances shall be kept to a minimum. Any alteration of existing dunes shall be coordinated with the Town LPO and appropriate property owner(s).
 - Sand cannot be placed within 30 feet of normal water level or normal high-water level.
 - Large/heavy equipment may not be used to conduct this work. Approved equipment is limited to a bobcat or an excavator with no wider than a six-foot blade; equipment with metal tracks may not be used.
 - Use of town owned public beach accesses to offload equipment and/or gain entry to the oceanfront is allowed only with prior authorization. This should be noted on your permit application and a deposit may be required.
 - Excavation depth is limited to one foot below the walkway measured from the lowest horizontal structural member.
 - The activity must not exceed the lateral bounds of the applicant's property unless written permission is received from adjoining landowners.
 - The activity must not significantly increase erosion onto neighboring properties.
 - Stabilization of projects is required, as applicable, with sand fencing and sprigging.
 - The permit constitutes authorization to complete only the activities described and shown on the approved permit document. Any modification to the proposed work shall require approval from a Town of Nags Head Permit Official (please call 252-449-6044). Please keep a copy of the permit authorization on-site for the project duration.

- Depending on the height and profile of accumulated sand in relation to a structure, such as a dune walkover, sand removal may not be permitted, and it may be necessary to reconstruct such structure on top of the established dune; in these circumstances additional permitting, including a CAMA Minor Permit, would be required.
- If you believe your project is eligible for an Authorization, please contact Ed Snyder, Code Enforcement Officer, at 252-449-6044 or ed.snyder@nagsheadnc.gov; please note, other permits/approvals and regulations, including flood damage prevention requirements, may be applicable.

CAMA Exemption Letter for Maintenance and Repair

- If your intended project does not qualify for a Sand Relocation Authorization, it may qualify for a CAMA Exemption Letter for Maintenance and Repair.
- Generally, an Exemption Letter is applicable for the same work and subject to the same timeline and scope conditions as work eligible for an Authorization; the major difference is that the property is located north of the Bonnet Street Beach Access and/or the sand to be removed or relocated is not windblown sand associated with the recent Beach Nourishment project.
- If you believe your project is eligible for an Exemption Letter, please contact Ed Snyder, Code Enforcement Officer, at 252-449-6044 or ed.snyder@nagsheadnc.gov or Margaux Kerr, Zoning Administrator, at 252-449-6045 or margaux.kerr@townofnagsheadnc.gov; please note, other permits/approvals and regulations, including flood damage prevention requirements, may be applicable.

CAMA Minor Permit

- If your intended project does not qualify for a Sand Relocation Authorization or CAMA Exemption Letter for Maintenance and Repair, it may qualify for a CAMA Minor Permit.

Generally, a CAMA Minor Permit is applicable for projects involving the removal of sand that is not windblown and not surrounding a structure.

- If you believe your project is eligible for a CAMA Minor Permit contact Margaux Kerr, Zoning Administrator, at 252-449-6045 or margaux.kerr@townofnagsheadnc.gov; please note, other permits/approvals and regulations, including flood damage prevention requirements, may be applicable.
